The Nimbus™ Ambulatory Infusion Pump is intended to deliver medications and/or fluids to a patient under the direction or supervision of a physician or other certified healthcare professional in clinical or nonclinical environments, such as homes. The device is indicated for subcutaneous, percutaneous, epidural, perineural, and intravenous infusion, including but not limited to patient controlled analgesia (PCA) delivery.

The Nimbus Administration Set is designed to administer fluids/medication from a container to a patient through a needle or a catheter.

The Nimbus Administration Set is a sterilized single use device which is not made with natural rubber latex or DEHP.
